Summary

I am a 2024 BCA graduate building a career in DevOps and Cloud Computing. I prefer practical implementation over just theory — I've built a serverless portfolio site on AWS with infrastructure managed through Terraform, and a load-balanced networking project using Nginx and EC2. I am looking for a Junior DevOps or Cloud Associate role where I can apply my skills and grow.

Skills

CI/CD & GitOps: Git, GitHub Actions

Languages & Databases: Python, MySQL

Cloud & Infrastructure: AWS, Linux

Infrastructure as Code (IaC): Terraform, AWS CloudFormation

Project Work

Serverless Cloud Portfolio

[Github](#)

- **Built** and **deployed** a **high-availability infrastructure** on **AWS** to host a digital portfolio, using S3, CloudFront, and Route 53 for reliable **DNS management** and fast global access.
- Built a Python **Lambda** function with **API Gateway** and **DynamoDB** powering a real-time visitor counter, using atomic DynamoDB update operations to avoid race conditions under concurrent traffic.
- **Migrated 100%** of infrastructure to **Terraform**, importing every existing AWS resource into code rather than managing it manually.
- **Designed** a **CI/CD pipeline** with **GitHub Actions** — **automated** tests gate every deployment, and AWS **authentication** uses **OIDC** federation, eliminating stored long-lived credentials entirely.
- Added **CloudWatch** alarms and **SNS** notifications for application errors, throttling, and billing thresholds, kept entirely within AWS's Always Free tier.
- **Secured** the application by setting up strict **IAM** access rules and adding **TLS/mTLS** certificates via **AWS Certificate Manager** to safely encrypt all user traffic.
- **Tech Stack:** Python, AWS (S3, CloudFront, Route53, API Gateway, DynamoDB, Lambda, CloudWatch, SNS, Terraform, GitHub Actions).

Load-Balanced Network Architecture

[Github](#)

- **Designed** a multi-server, load-balancing architecture on **AWS EC2**, using Nginx as a reverse proxy across Nginx and Apache backend servers.
- Implemented **IP blocking** with iptables and **rate limiting** to reduce the risk of traffic abuse.
- **Tech Stack:** AWS (EC2, VPC, Subnet), Linux Administration, Nginx reverse proxy, Apache.

Education

ScalerAcademy DevOps Engineering Program

Present

Relevant Coursework: Linux Fundamentals, Docker, Kubernetes, CI/CD, GitHub Actions, AWS, Monitoring & Observability

Punyashlok Ahlyadevi Holkar University Solapur

2024

BCA (Computer Science)

CGPA: 9.5/10

Achievements

- Achieved third place in the Bachelor of Computer Applications (BCA) program at Solapur University.
- Achieved the Standard Milestone in the Google Arcade Program.
- Technical Writing: Writing architecture walkthroughs, debugging stories, and building documentation on Hashnode—I document what I build to solidify my understanding and share what I learn with others.
